

Technology Stack

Date	6 July 2026
Team ID	XXXXXX
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	<i>Streamlit</i>	<i>Used to build a simple, interactive web interface for users to enter profile details and view AI-generated networking suggestions.</i>

architecture and provide a brief justification for your choice.

Technology Stack Details

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	<i>Python, FastAPI</i>	<i>FastAPI handles API requests, processes user input, and connects the frontend with AI models efficiently.</i>
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	<i>JSON Files (history.json, feedback.json)</i>	<i>Stores generated networking history and user feedback. Chosen because it is lightweight and suitable for this project.</i>
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	<i>Localhost (Development Environment)</i>	<i>The application is currently executed on the local machine using Uvicorn and Streamlit. It can be deployed to cloud platforms such as Render or Railway in the future.</i>

5	Version Control & CI/CD	<i>Git & GitHub</i>	<i>Used for version control, source code management, backup, and collaboration throughout the project development.</i>
	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools	<i>Hugging Face Transformers (DistilBERT, GPT-2), Wikipedia API, Requests Library</i>	<i>DistilBERT extracts themes, GPT-2 generates networking suggestions, Wikipedia API performs fact checking, and the Requests library enables communication between Streamlit and FastAPI.</i>
	<i>(e.g., Stripe, Twilio, Google Maps)</i>
