Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	Develop an AI-powered Personalized Networking Assistant that helps students and professionals create personalized networking messages, receive conversation suggestions, extract important themes from their profiles, and verify information using AI models.
Scope	The project enables users to enter their profile details (name, skills, interests, and career goals). It generates professional networking messages, provides AI-based recommendations, extracts themes using DistilBERT, performs fact checking with the Wikipedia API, and stores conversation history and user feedback.
Problem Statement	
Description	Many students and professionals struggle to start meaningful conversations during networking events. They often lack confidence, personalized guidance, and relevant conversation starters, making networking less effective.

Impact	This problem reduces networking opportunities, limits professional connections, and affects career growth. Providing AI-generated networking suggestions helps users communicate confidently and build stronger professional relationships.
Proposed Solution	
Approach	Develop an AI-powered web application using Streamlit and FastAPI . The system analyzes user profiles using DistilBERT, generates personalized networking messages and recommendations using GPT-2, verifies facts with the Wikipedia API, and stores history and feedback using JSON files.
Key Features	• Personalized networking message generation • AI-powered theme extraction using DistilBERT • ☑ Professional networking recommendations

	• Wikipedia API-based fact checking • Conversation history management • User feedback collection • Simple Streamlit web interface • ☑ FastAPI backend for API services

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU	Intel Core i5 / AMD Ryzen 5 or above
Memory	RAM	8 GB

Storage	Disk space for data, models, and logs	20 GB Free Space
Software		
Frameworks	Python frameworks	FastAPI, Streamlit
Libraries	Additional libraries	Transformers, Torch, Requests, Wikipedia, JSON
Development Environment	IDE	Visual Studio Code
Data		
Data	User Input Data	Name, Skills, Interests, Career Goals (JSON Format)
