

Coding & Solution

Date	7 July 2026
Team ID	xxxxxx
Project Name	Personalised Networking Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/akshayapeteti/personalized-networking-assistant
Programming Language(s)	Python
Framework(s) Used	FastAPI, Streamlit

Key Features Implemented	• User profile input • AI-based theme extraction • Personalized networking message generation • Fact checking using Wikipedia API • Conversation history storage • User feedback collection
Pending / Incomplete Features	Cloud deployment and advanced personalization features can be added in future.
Setup / Run Instructions	1. Install required libraries using <code>pip install -r requirements.txt</code> 2. Start backend: <code>uvicorn main:app --reload</code> 3. Start frontend: <code>streamlit run app.py</code>

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments: The application follows a modular architecture with separate components for frontend, backend, AI processing, and data storage. The code is organized for readability, maintainability, and future scalability. Version control is maintained using GitHub.
