| <b>Team ID</b>       | XXXXXX                            |
| <b>Project Name</b>  | Personalized Networking Assistant |
| <b>Maximum Marks</b> | 5 Marks                           |

### Functional Features Overview:

This document lists all the functional features included in the project solution. Each feature is described with its purpose, implementation status, and contribution to the overall solution.

| S.No | Feature Name                  | Feature Description                                                      | Module / Component        | Status (Done / In Progress / Pending) | Marks Contribution |
|------|-------------------------------|--------------------------------------------------------------------------|---------------------------|---------------------------------------|--------------------|
| 1    | User Profile Input            | Allows users to enter name, skills, interests, and career goals.         | Streamlit Frontend        | Done                                  | Akshaya            |
| 2    | AI Theme Extraction           | Extracts important topics and interests from user information.           | DistilBERT Module         | Done                                  | Akshaya            |
| 3    | Networking Message Generation | Generates personalized professional networking messages.                 | GPT-2 Topic Generator     | Done                                  | Akshaya            |
| 4    | Recommendation Generation     | Provides conversation starters based on user profile and interests.      | AI Processing Module      | Done                                  | Akshaya            |
| 5    | Fact Checking                 | Verifies information related to topics using external knowledge sources. | Wikipedia API Integration | Done                                  | Maheswar           |
| 6    | Conversation History          | Stores previously generated messages for future reference.               | JSON Storage              | Done                                  | Maheswar           |
| 7    | Feedback Collection           | Allows users to submit feedback on generated suggestions.                | Feedback Module           | Done                                  | Jayani             |
| 8    | API Communication             | Connects frontend and backend using REST APIs.                           | FastAPI Backend           | Done                                  | Akshaya            |

Feature Summary:

| Metric                     | Count / Value |
|----------------------------|---------------|
| Total Features Planned     | 8             |
| Total Features Implemented | 8             |
| Core / Must-Have Features  | 6             |

|                                    |   |
|------------------------------------|---|
| Additional / Nice-to-Have Features | 2 |
| Features Tested & Verified         | 8 |

Feature Category Breakdown:

| S.No | Category                  | Features in Category | Example Features                                            |
|------|---------------------------|----------------------|-------------------------------------------------------------|
| 1    | User Interface (UI)       | 2                    | Streamlit interface, User profile input                     |
| 2    | Backend / Logic           | 3                    | FastAPI APIs, Message generation, Recommendation processing |
| 3    | Database / Storage        | 2                    | History storage, Feedback storage using JSON                |
| 4    | API / Integration         | 2                    | Wikipedia API, Hugging Face AI models                       |
| 5    | Security / Authentication | 1                    | Input validation using Pydantic                             |
