|---------------|-----------------------------------|
| Date          | 8 July 2024                       |
| Team ID       | XXXXXX                            |
| Project Name  | Personalized Networking Assistant |
| Maximum Marks | 1 Mark                            |

### Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

### Current System Limitations:

| S.No | Limitation                                       | Impact                                                 | Priority to Address<br>(High / Medium / Low) |
|------|--------------------------------------------------|--------------------------------------------------------|----------------------------------------------|
| 1    | Application currently runs locally               | Limited accessibility for users                        | Deploy application on cloud platform         |
| 2    | JSON files used for data storage                 | Difficult to manage large amounts of user data         | Deploy application on cloud platform         |
| 3    | AI responses depend on current implemented logic | Limited personalization compared to advanced AI models | Deploy application on cloud platform         |

### Scalability Plan:

| S.No | Scalability Aspect | Current State                                    | Proposed Upgrade / Solution                                   |
|------|--------------------|--------------------------------------------------|---------------------------------------------------------------|
| 1    | User Load          | Supports limited local users                     | Deploy application on cloud servers to support multiple users |
| 2    | Data Storage       | Uses JSON files for storing history and feedback | Integrate database such as MongoDB / PostgreSQL               |
| 3    | Performance        | Suitable for small-scale usage                   | Optimize APIs and add caching for faster responses            |
| 4    | Security           | Basic local application security                 | Add authentication and secure user data management            |

**Future Roadmap:**

|       |                                      |            |                                     |
|-------|--------------------------------------|------------|-------------------------------------|
| Phase | Deploy application on cloud platform | 1-2 Months | Users can access application online |
|-------|--------------------------------------|------------|-------------------------------------|

|         |                                                      |            |                                                     |
|---------|------------------------------------------------------|------------|-----------------------------------------------------|
| Phase 2 | Integrate Gemini AI API for advanced suggestions     | 2-3 Months | More accurate and personalized networking responses |
| Phase 3 | Add user authentication and profile management       | 3-4 Months | Secure personalized user experience                 |
| Phase 4 | Generate networking reports and LinkedIn integration | 4-6 Months | Improved professional networking assistance         |
